Plotting in R

R has the multiple plotting and graphics systems. The most popular of which is **ggplot2**.

```
plot(cars)
```

ggplot is much more verbose than plot. Need to install the package.

```
# install.packages("ggplot2")  
library(ggplot2)
```

```
bb <- ggplot(cars, aes(speed, dist)) + geom_point()
```

```
bb
```

```
bb +  
  aes(x=speed, y=dist) +  
  geom_point() +  
  geom_smooth()
```

``geom_smooth()`` using method = 'loess' and formula = 'y ~ x'

ggplot needs three things (data, aes(x,y)) + geom

```
cc<-bb + geom_smooth(method='lm', se=FALSE)
```

```
cc+ labs(title="Speed and Stopping Distances of Cars",
  x="Speed (MPH)",
  y="Stopping Distance (ft)",
  subtitle = "Your informative subtitle text here",
  caption="Dataset: 'cars'") +
  geom_smooth(method="lm", se=FALSE) +
  theme_bw()
```

`geom_smooth()` using formula = 'y ~ x'

`geom_smooth()` using formula = 'y ~ x'

Speed and Stopping Distances of Cars

Your informative subtitle text here

Dataset: 'cars'

look at the top rows of the genes dataframe.

```
url<-"https://bioboot.github.io/bimm143_W23/class-material/up_down_expression.txt"
genes<-read.delim(url)
```

```
head(genes)
```

	Gene	Condition1	Condition2	State
1	A4GNT	-3.6808610	-3.4401355	unchanging
2	AAAS	4.5479580	4.3864126	unchanging
3	AASDH	3.7190695	3.4787276	unchanging
4	AATF	5.0784720	5.0151916	unchanging
5	AATK	0.4711421	0.5598642	unchanging
6	AB015752.4	-3.6808610	-3.5921390	unchanging

plot the data

```
ggplot(genes) +
  aes(x=Condition1, y=Condition2, color=State) +
  geom_point() +
  labs(title="Gene distribution", subtitle="by states")
```

check the number rows and columns

```
nrow(genes)
```

```
[1] 5196
```

```
ncol(genes)
```

```
[1] 4
```

```
table(genes$State)
```

down	unchanging	up
72	4997	127

```
round( table(genes$State)/nrow(genes) * 100, 2 )
```

down	unchanging	up
1.39	96.17	2.44

This is the percentage of each categories

```
p<-ggplot(genes) +
  aes(x=Condition1, y=Condition2,color=State) +
  geom_point() +
  labs(title="Gene distribution", subtitle="by states")

p+scale_colour_manual( values=c("blue","gray","red") )
```

Extra practice: The gap minder dataset

```
url <- "https://raw.githubusercontent.com/jennybc/gapminder/master/inst/extdata/gapminder."

gapminder <- read.delim(url)
```

```
library(dplyr)
```

Attaching package: 'dplyr'

The following objects are masked from 'package:stats':

filter, lag

The following objects are masked from 'package:base':

intersect, setdiff, setequal, union

```
gapminder_2007 <- gapminder %>% filter(year==2007)
```

```
ggplot(gapminder_2007) +  
  aes(x=gdpPercap, y=lifeExp) +  
  geom_point(alpha=0.5)
```

```
ggplot(gapminder_2007) +
  geom_point(aes(x = gdpPercap, y = lifeExp,
                 size = pop), alpha=0.5) +
  scale_size_area(max_size = 10)
```

```
gapminder_1957 <- gapminder %>% filter(year==1957)

ggplot(gapminder_1957) +
  aes(x = gdpPercap, y = lifeExp, color=continent,
      size = pop) +
  geom_point(alpha=0.7) +
  scale_size_area(max_size = 10)
```

```
gapminder_1957 <- gapminder %>% filter(year==1957 | year==2007)

ggplot(gapminder_1957) +
  geom_point(aes(x = gdpPercap, y = lifeExp, color=continent,
                 size = pop), alpha=0.7) +
  scale_size_area(max_size = 10) +
  facet_wrap(~year)
```
